

Renew™ is produced with our Natural Foam Technology™ process, ensuring the consistency and quality you have come to expect only from Carpenter Co. It's bio-based, allowing your customers to leave a smaller environmental footprint, while reducing our nation's dependency on foreign oil. Renew™ is fully recyclable, is PBDE free, and is made without the use of CFC's.

Renew™ is available in a wide assortment of firmness and densities. We've even utilized our expertise in manufacturing Qualux™ high resiliency foams to produce the first bio-based HR foam. Endorsed by our Reinhart Technical Center, the performance of Renew™ is second to none.

Expect quality and consistency, but don't expect to sacrifice comfort or the need to reengineer. The wide product range of Renew™ was designed for transparent changes, while allowing mainstream consumers to feel good about the choices they make.
