

State-Of-The Art Equipment

Carpenter Co. utilizes only the most advanced state-of-the-art equipment available. From 6 stream mix heads to advanced robotics to quick mold change outs, Carpenter Co. is able to respond to any customer need.

Our molding operations located in Elkhart, Indiana are computer controlled to ensure the highest quality finished parts.

Each mold is recognized digitally to assure for proper tool temperature via heated water lines, for specific formulation blends and robotic pour patterns, creating the optimum setting for part reproducibility.

Available Products and Application

We make a wide range of products serving a multitude of industries.

We produce:

- High Density Memory Foams
- Low Density Memory Foams
- High Density HR Foams
- Low Density HR Foams

We have the ability to produce a wide range of firmnesses and densities, to include dual density and dual firmness shot parts.

In-House Raw Material Control and Capacity

We are basic in chemicals. Whether it be our facility in Texas, which houses the world's largest polyol reactor, or our in-house chemical blending department, which manufactures the poly and iso systems on-site, our vertical integration gives Carpenter Co. complete quality control of the finished parts.

Our high volume output carousels offer the maximum part yield per tool, allowing for minimal tooling expenditure. While, our air bag tooling closure system provides infinite tooling lifetimes.

Whatever your need, design or pattern, if quality and timely delivery are important, Carpenter Co. stands ready to meet the challenge.

There is no other company that has such a diverse ability to meet your every expectation.
