

Serene[®] Foam

Want to take advantage of today's newest comfort technology without breaking the bank? You deserve the very best in foam development. Serene[®] foam has been created by our team of technical experts and designed to offer the optimum in comfort and support imaginable.

Serene[®] foam is enhanced with Supportive Air Technology[™], increasing the level of support without compromising comfort. Supportive Air Technology[™] reduces pressure on sensitive areas of the body, including hips and shoulders, to prevent tossing and turning throughout the night. Serene[®] foam also reduces motion transfer, so you and your partner can avoid unnecessary awakenings. Serene[®] foam sleeps cool. It is not temperature sensitive, so heat dissipates quickly, keeping you cool and dry.

Serene[®] foam can be used as a fantastic top layer to provide additional comfort to a mattress and will make a fabulous feeling pillow. It can be combined with a high density polyether foam to produce a soft yet supportive, and comfortable mattress.

Serene[®] foam layer cradles and comforts your body while millions of air cells give the support vital for natural spinal alignment.

Supportive Air Technology[™]

Serene[®] foam is designed with billions of microscopic air capsules to enhance support while reducing pressure on sensitive areas of the body.

Reduced motion transfer

for an uninterrupted night's sleep.

Body heat dissipates

quickly for a cooler night's sleep.
