

Celsius® Visco Foam

A memory foam with a fantastic feel and a slow recovery, Carpenter's Celsius® Visco elastic foam has excellent compression set properties, making it a perfect foam for bedding applications. Our memory foams are temperature sensitive and mold to the body to offer personalised comfort and support. They can ease pressure on sensitive areas, reduce tossing and turning, leading to a more comfortable night's sleep.

The foam's adaptable nature means it can be used in quilting, as a transitional layer in mattresses and as a soft foam pillow.

Super-soft feel
